

# DEATH BY AUDIO®

# REVERBERATION MACHINE

## OPERATION MANUAL

# REVERBERATION MACHINE

The original synthetic atmosphere creator. The *Reverberation Machine* offers up drippy, saturated spring reverbs and cavernous expanses in one small package. Push the Altitude and hear the reverb blasted with gloom and distorted shimmer for the ultimate wall of sound. An instant classic for a reason, the *Reverberation Machine*'s unique and experimental sounds are equally at home twisting your sound into a galactic nebula or adding a sinister and yearning beauty to anything you plug in.

## VOL

Controls the master output volume.

## ALTITUDE CONTROL

This is similar to gain. Turn this up to bring on a more wide open and distorted sound.

## VERB

Blends in the amount of reverb.

**DARK CAVERNOUS REVERBERATION.**

**BRIGHT SHIMMERING REVERBERATION.**

\*When the altitude and verb controls are turned past 12 o'clock, the pedal can produce potentially harmful volumes, white noise, and other artifacts.

Operates on a standard 9V DC power supply (2.1mm, center-negative). We recommend Death By Audio's **RAW POWER** power supply for optimal performance. The pedal draws 54 mA of current when engaged.
